Proposed Development

T1- Ash

Reduce lateral crown spread back by 1-2m from branch tips to improve clearance over garden

T2- Copper Beech

Remove lowest lateral limb on the Western side back to the main trunk (approximately 10cm in diameter)

Remove the smaller limb above that back to the main trunk (Less than 10cm in diameter)

Reduce the remainder of the Western overhang back by up to 2m from branch tips to improve clearance over garden and sheds.

The crown extends further over the Western side due to other trees on the other sides, so the proposed works would not imbalance the tree.

Ensure a natural flowing canopy outline is maintained and all works back to a suitable growth point other than the two limbs being removed.

T3- Olive

Reduce all round by 1-2m

T4- Pear

Reduce all round by 1-2m from branch tips back to the previous points, thin by 10%

T5- Apple

Reduce all round by 1-2m from branch tips back to the previous points, thin by 10%

T1-Crab Apple

Heavily leaning tree over the boundary wall and neighbouring property.

Extensive end weight and leverage on the main trunk due to the horizontal crown spread.

Whilst attractive and unusual form, owner is concerned about liability due to the lean and numerous targets in the immediate area.

Suggested works are to reduce the crown by 3-4m from branch tips.

Retain the natural and flowing canopy outline as far as possible.

The reasons for these works are to lessen the branch end weight and
