

Wimbledon Park Lake Project - (Reservoir Safety and Desilting)

Summary of Technical Steering Group Meeting – 05 March 2019

Surveys:

- Ground investigation surveys – the detail of the scope of works has been developed and some soft market testing with four companies is underway in readiness for finalising the scope and procuring the survey via the London Tenders Portal.

Procurements:

- LBM and the Environment Agency will explore the various procurement options giving due consideration to available and existing frameworks versus open procurements for each of the procurements that need to be undertaken.

Flood Study Report – Stage 2:

- The draft report is now with the Council, Environment Agency and the appointed All Reservoirs Panel Engineer (ARPE) for final checking, comments and observations.
- Option 2 remains BWB's preferred option – this includes a change to the overflow weir in combination with other structures in order to provide a safe overflow. This option is the least intrusive of those considered.

Water Quality and Pollution:

- Noted some local concerns over water quality, which are being investigated.

Heritage, History and Archaeology:

- Noted the need to include some archaeological investigations into the Geotechnical Survey

Finance:

- Discussions on various funding options

Risk Assessment:

- This was reviewed and updated

Date of Next Meeting:

- 02nd April 2019
